

## CLAIMS

1. A digital sound television system comprising a color television and at least one pair of three-stage frequency-splitting column sound boxes with each having three speakers, said digital sound television system further comprising a front amplifier and a power amplifier arranged in a control circuit of the color television for sound signal processing and units, and stereo outputs of said digital sound television system being coupled respectively to the pair of sound boxes that are outside the color television.
2. A digital sound television system as recited in Claim 1, wherein a plurality of speakers of said sound boxes are built in the color television.
3. A digital sound television system as recited in Claim 1, wherein said speakers are those for a surrounding stereo.
4. A digital sound television system as recited in Claim 2, wherein said speakers are those for a surrounding stereo.
